### Investment approach

While seeking to maximize current income, our investment management team emphasizes credit quality, liquidity and appropriate diversification. Embedded in our credit research process is the integration of issuer-level sustainable investing analysis as guided by UBS-AM's approach to ESG research and evaluation methodology. The Fund is a "feeder fund" that invests in securities through an underlying "master fund." The master fund invests in a diversified portfolio of high-quality, short-term, US dollar-denominated money market instruments of governmental and private issuers while incorporating fundamental sustainability factors, such as ESG performance of each issuer. Our credit and portfolio management teams continually monitor individual issuers in an attempt to assure maintenance of credit quality.
